Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☐ Responsive to communication(s) filed on ____.
- 2a) ☐ This action is **FINAL**. 2b) ☒ This action is non-final.

DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Venkatraman et al (U.S. Patent 6,170,007) in view of Thielman et al (U.S. patent 6,296,353).

Regarding claim 1 and 9 Venkatraman et al disclose: Internet hardware and software for providing the print engine with Internet connectivity (please note Fig.5 item 10 the printer and the item 100 the internet, also please note Fig.1B the printer comprising web page server item 18 and device –specific hardware and software embedded in the processor, column 4 lines 22-32 and column 4 lines 65-67 and column 5 lines 1-3) including a microprocessor communicating with the printer hardware and software (please note Fig.1B items 200 the processor, item 300 the hardware and the software embedded in the processor, column 4 lines 21-29) the microprocessor comprising an embedded Internet server having a valid IP address (please note Figs.1A&B, column 3 lines 21-45). However Venkatraman et al do not disclose: An ink jet print engine with Internet connectivity, comprising: printer hardware and software providing a functioning printer, including a piezoelectric printhead for dispensing ink onto a substrate. On the other hand Thielman et al disclose: An ink jet print engine with Internet connectivity, comprising: printer hardware and software providing a functioning

printer, including a piezoelectric printhead for dispensing ink onto a substrate (please note Fig.1, column 4 lines 43-56).

Therefore it would have been obvious to a person of ordinary skill in art at the time of the invention to modify Venkatraman et al's invention according to the teaching of Thielman et al, where Theilman et al in the same field of endeavor teach the way piezoelectric print head is used instead for purpose of making the printer more robust and effective.

Regarding claim 2 Venkatraman et al disclose: The ink jet print engine of claim 1, wherein the printer software stores one or more valid IP addresses of servers corresponding to maintenance or service centers for one or more components of the print engine (please note column 7 lines 8-17 where the address or URL of for example service contract also note column 4 lines 9-20).

Regarding claim 3 Venkatraman et al disclose: The ink jet print engine of claim 1, wherein the microprocessor comprises a chip (please note column 4 lines 65-67 and column 5 lines 1-3).

Regarding claim 4 Venkatraman et al disclose: The ink jet print engine of claim 3, wherein the chip comprises Ethernet MAC and system controllers (please note column 5 lines 1-3).

Regarding claim 5 Venkatraman et al disclose: The inkjet print engine of claim 4, wherein the system controllers include memory, DMA, interrupts and timers. (please note column Fig.1B, column 4 lines 28-31).

Regarding claim 6 Venkatraman et al disclose: The ink jet print engine of claim 3, wherein the chip comprises cache, I/O, real time operating systems, device driver software and communications protocol software. (please note column 4 lines 65-67 and column 5 lines 1-3).

Regarding claim 7 Venkatraman et al disclose: The ink jet print engine of claim 1, wherein the printer comprises integrated networking software (please note column 4 lines 65-67 and column 5 lines 1-3).

Regarding claim 8 Venkatraman et al disclose: The ink jet print engine of claim 1, wherein the microprocessor uses an RTOS operating system (please note column 4 lines 59-64).
